**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 14, a "field-oxide segment" is formed over a part of the channel region. The designation "field-oxide" is not clear, because usually the channel region is not considered part of the field. (The field surrounds and isolated the active areas.) So it is not clear whether the "field-oxide segment" would be simply any thick segment of oxide, similar in thickness to that of a field oxide, or whether the claim requires that the "field-oxide segment" that is formed over the part of the channel region must actually be an extension of the oxide layer that surrounds the active area.

Also, in claim 26, the "second arrays of islands formed over said bulk and being enclosed by said first doped region" is not clear. Does "enclosed" mean that, in a top view, the doped region would completely encircle the islands? (This seems to be consistent with the figures.) Taken literally, "enclosed by" would mean "completely surrounded by," but it seems that the claim intends for the islands to be above the substrate, and the doped regions are to be in the substrate.
